Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           is not known and their order in the sequence as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                       60952

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library

construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Oshima, A., Takahashi-Fujii, A., Tanase, T., Imose, N., Takeuchi, K., Arita, M., Musashino, K., Yuuki, H., Hara, H., Sugiyama, T., Irie, R., Otsuki, T., Sato, H., Wakamatsu, A., Ishii, S., Yamamoto, J., Isono, Y. The invention discloses isolated histatin polynucleotides and CC polypeptides, which comprise sequences expressed in bovine. Histatins are chistidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the CC candidosis. Also disclosed are compositions comprising the histatin CC polypeptide or polynucleotide, and at least one component consisting of polypeptide or polynucleotide, and at least one composentions. The CC physiological or pharmaceutical carriers or immunostimulants. The CC physiological or pharmaceutical carriers or immunostimulants. The CC comprising the polypeptide, is useful for treating (e.g. gene therapy) a CC disorder in a mammal, particularly microbial or fungal infections. The CC mapping or in the positional cloning of genes. Specifically, the CC mapping or in the positional cloning of genes. Specifically, the CC polypeptide or polynucleotide is useful for treating fungal or bacterial crifections of the oral cavity (e.g. dental carries, plaque or tartar), CC vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis CC systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is as a machinal carries, plaque or treating Systemic infections such as systemic candida infection. The polypeptide or treating mastitis. The sequence presented is a cDNA encoding a bovine treating histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

polypeptides, which comprise sequences expressed in bovine. Histatins histidine rich and specific to the salivary secretions. They are belie to function as part of the non-immune defence system, particularly in oral cavity and have promise as therapecutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting ophysiological or pharmaceutical carriers or immunostimulants. The
                                                                                                                                                                                                                                                                                                                 New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mare; infections of the oral cavity, vagina, urethra, ear or skin,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           histatin polynucleotide, polypeptide, or the cosmetic composition comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The histatin polynucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vegina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                      Cow; gene; ss; histatin; bovine; salivary secretion; oral cavity; non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tartar; cystic fibrosis; systemic infection; Candida infection; mastitis; fungicide; antibacterial.

                                                                                                                                                                                                                                                                                                                                                                     The invention discloses isolated histatin polynucleotides and CC polypeptides, which comprise sequences expressed in bovine. Histatins are CC histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the CC candidosis. Also disclosed are compositions comprising the histatin of polypeptide or polynucleotide, and at least one composition the instatin of polypeptide, polypeptide, or the cosmetic consisting of histatin polynucleotide, polypeptide, or the cosmetic composition composition the polypeptide, is useful for treating (e.g. gene therapy) a discrer in a mammal, particularly microbial or fungal infections. The CC histatin polynucleotide is also useful for treating (e.g. gene therapy) a disorder in a mammal cloning of genes. Specifically, the CC mapping or in the positional cloning of genes. Specifically, the CC polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental carries, plaque or tartar), CC vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastits. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                         Query Match

  The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polynucleotide, polypeptide, or the cosmetic composition
                                                                                                                                                                                                                                                                                                                                      New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mar e.g. infections of the oral cavity, vagina, urethra, ear or skin, systemic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       29-OCT-1999; 99US-162701P.

The histatin polynucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 525

CC candidosis. Also disclosed are compositions comprising the histatin CC polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The CC physiological or pharmaceutical carriers or immunostimulants. The CC histatin polynucleotide, polypeptide, or the cosmetic composition CC comprising the polypeptide, is useful for treating (e.g. gene therapy) a CC disorder in a mammal, particularly microbial or fungal infections. The CC histatin polynucleotide is also useful in genome mapping, physical CC mapping or in the positional cloming of genes. Specifically, the CC polypeptide or polynucleotide is useful for treating fungal or bacterial CC infections of the oral cavity (e.g. dental caries, plaque or tartar), CC vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis CC caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide CC or polynucleotide is also useful for veterinary applications e.g. for CC treating mastitis. The sequence presented is the bovine mammary tissue CC cDNA clone which was used to illustrate mRNA expression levels of CC mammary-gland specific sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Glenn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-AUG-1999; 99US-150330P.

The invention discloses isolated histatin polynucleotides and CC polypeptides, which comprise sequences expressed in bovine. Histatins are CC histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the CC oral cavity and have promise as therapeutic agents in humans with oral CC candidosis. Also disclosed are compositions comprising the histatin CC polypeptide or polynucleotide, and at least one composition of physical or pharmaceutical carriers or immunostimulants. The CC histatin polynucleotide, polypeptide, or the cosmetic composition CC comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The CC histatin polynucleotide is also useful for treating (e.g. gene therapy) a CC mapping or in the positional cloning of genes. Specifically, the CC mapping or in the positional cloning of genes. Specifically, the CC polypeptide or polynucleotide is useful for treating fungal or bacterial CC infections of the oral cavity (e.g. dental caries, plaque or tartar), CC vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis CC caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating Systemic infections such as systemic Candida infection. The polypeptide CC or polynucleotide is also useful for veterinary applications e.g. for CC treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        23-AUG-1999;

The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polynucleotide, polypeptide, or the cosmetic composition
                                                                                                                                                                                                                                                                                                                                                          New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mare infections of the oral cavity, vagina, urethra, ear or skin,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorder in a mammal, particularly microbial or fungal infections. The histatin polynucleotide is also useful in genome mapping, physical mapping or in the positional cloning of genes. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating massitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; secreted protein; expressed sequence tag; EST; haematopoiesis; tissue growth; activin; inhibin; chemotaxis; chemokinesis; haemostatic; receptor; ligand; thrombolytic; anti-inflammatory; cadherin; anti-tumour;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
```

The polynucleotide, which is a secreted EST, and the encoded prot are predicted to have useful biological activities which would mathem suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis recularing

e tag (EST). ded protein would make

New polynucleotides encoding human secreted proteins - dee.g. human blood, kidney, foetal lung, placenta, testes, ovary, pituitary, retina and colon cDNA libraries.

The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 gastrointestinal; gene therapy; GENSET; neavy metal toxicity;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (ACC51060-ACC51115) and proteins (ABR48453-ABR48508). The GENSET sequences are useful for preparing a composition for treating GENSET-related disorders. They can also be used as markers for tis which the corresponding protein is preferentially expressed, as me weight markers on Southern gels, as chromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively determined levels of GENSET expression in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cytostatic; antiinflammatory; nootropic; neuroprotective; care gastrointestinal; gene therapy; GENSET; heavy metal toxicity;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                         The present invention relates to novel GENSET polynucleotides (AB236404-AB236911) encoding polypeptides (AB75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding
                                                                                                                                                                                                                                                                                                                                                                                                                                      New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic, antiinflammatory; nootropic; neuroprotective; cardiant; gastrointestinal; gene therapy; GENSET; heavy metal toxicity; cancer; inflammatory disease; immune disorder; neuromuscular; toxicity; central nervous system; cardiovascular; gastrointestinal; gene; ss.

                                                                        The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomatro. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNJ biodiversity and for nutritional purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25-JAN-2000; 2000US-0491404.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                       The present invention relates to human lysine-rich statherin protein (LRSP) (AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with the DNA of human statherin (the present sequence) and human basic histidine-rich protein (AAY94528). Human statherin is a phosphorocain that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Purified polypeptide used for treating or preventing a disorder characterized by expression or activity of lysine-rich statherin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-MAY-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lysine-rich statherin protein; LRSP; acidic precipitation inhibitor; autoimmune; inflam asthma; allergy; diabetes mellitus; fungal;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-OCT-2000

                    The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, activity, haemastactory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                   Agostino N

        The present invention relates to human lysine-rich statherin protein (LRSP) (AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with human statherin protein (AAY94527) and human basic histidine-rich protein (the present sequence). Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful
